Emerging materials failures often lead to life threatening and enormous financial repercussions to families and their insurers. It is important to understand the fundamentals of plastic parts in order to dispel a material failure and its consequences and address potential recovery avenues.

During the webinar, **Philip Carroll** and Paul Gramann (The Madison Group) will review the greatest plastic failures in history, including the Space Shuttle Challenger and address more recent polymer failures including washing machine hoses, water heaters, flexible water supply lines, and coupling nuts.
